

Oh the Places You'll Go...

Select here:

Country 1 ▾

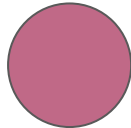

Country 2 ▾

Radar Chart of all attributes (with both countries laid on top)

Country
1

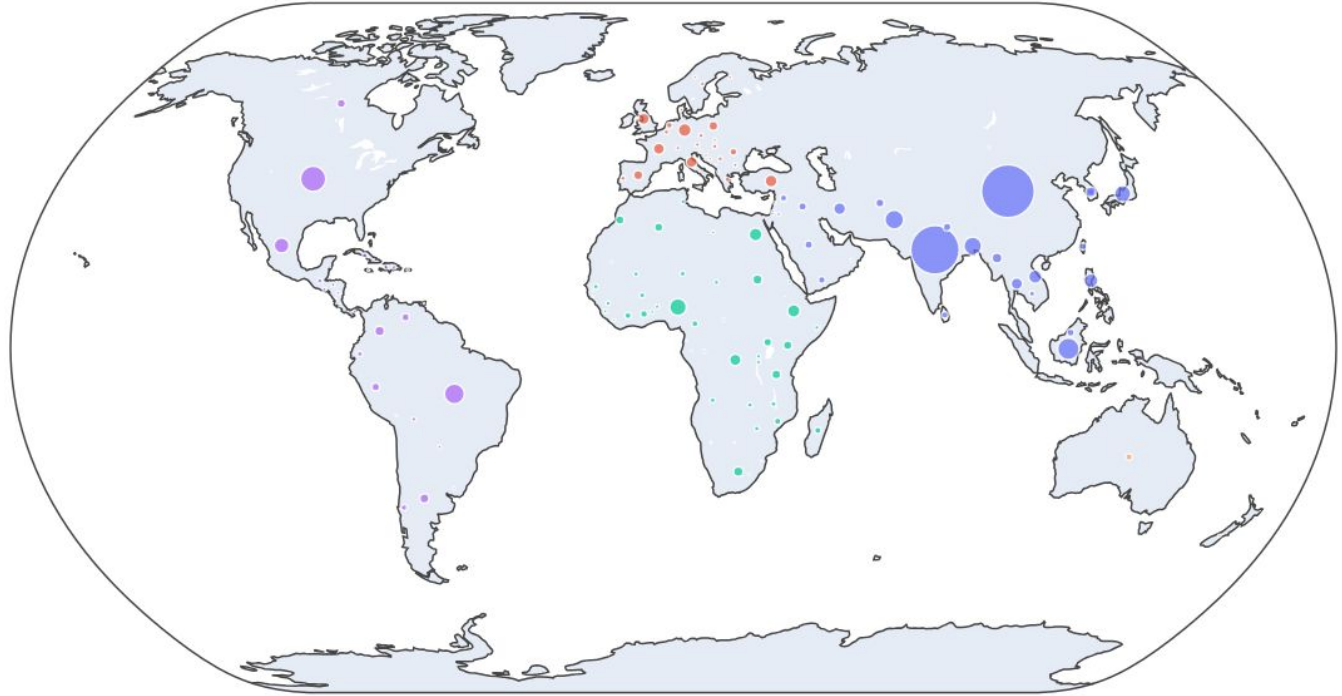

Strength: health
Weakness: safety

Country
2

Strength: rights
Weakness: climate

*Each country will be located by a red/blue dot

More details...

- For the radar chart, the two countries selected will auto populate in the chart based on the existing, normalized values (1-100) of the rankings of each for each measure
- For the stacked bar chart, this will auto populate with the countries as well and their respective measures.
- Below the stacked bar chart, the 'strength' and 'weakness' will pull from the data and display two miniature bubble charts, just for context on the scale of the two strengths and weaknesses side by side
- Lastly, to give an understanding of location, the map will just label where each country is (red/blue) for extra context for travel purposes. I will have to pull in extra data for this, likely through gapminder
